## Summary

- I am passionate about molecular biology research, particularly in cancer biology and innate immunity.
- My research background mainly focused on understanding the molecular complexity of protein methylation in cancer.
- The need to explore public RNAseq datasets from cancer patients drove me to (self)-study bioinformatics which I also found a very fascinating field.
- In addition, I am also familiar with molecular signaling such as inflammation-related transcription factor signaling ie. NF- $\kappa$ B, AP-1, and IRF3.
- As part of my combined Master-PhD study, I have elucidated several molecular targets of plant extracts or compounds in the context of their anti-inflammatory property.
